Phlyx cristal

**MISSION ORDER**

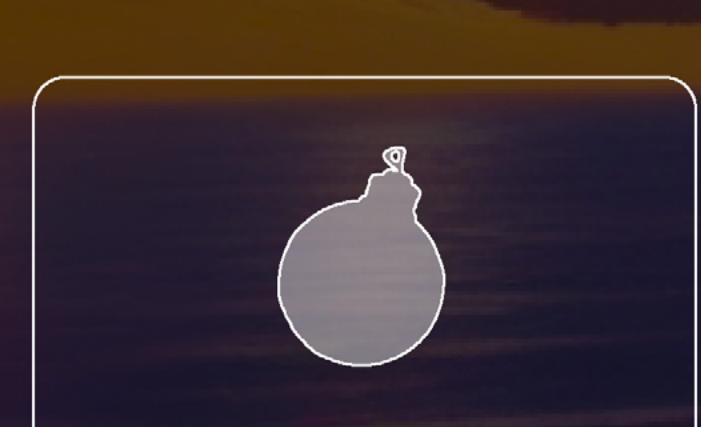

Commandant Blip and Astale are tasked with infiltrating Milenaa to dismantle a drug trafficking operation. Intelligence from a police informant suggests that individuals have been observed handling Phlyx crystals, which emit a dust when exposed to high temperatures. This dust directly affects serotonin and dopamine production in the brain.

When synthesized in large quantities, the dust forms a powder that, when ingested, induces euphoric and sometimes hallucinogenic effects, transporting the user on a cosmic journey. Previous reconnaissance attempts have failed to locate the laboratory responsible, with no operatives returning.

Blip and Astale are relied upon to uncover the truth behind these operations, locate the clandestine lab, and eliminate the threat. Good luck.
